

By adding **thinpots** to **thintanks**
you can create

TANKS THAT **GROW**

Thinpots are the specifically designed planter pots to compliment the 1000 and 2000 litre Thintanks.

Thinpots are designed to hang on the front of the Thintanks by clipping directly onto the irrigation pipe that is supported by concealed clips inserted into the cross wall connection voids of the Thintanks.

Thinpots have a hole in the back of the pot located centrally at the top to allow for an irrigation dripper to be installed. There is also four 20mm upstands to create a water reservoir in the bottom with two 6.5mm drainage holes.
